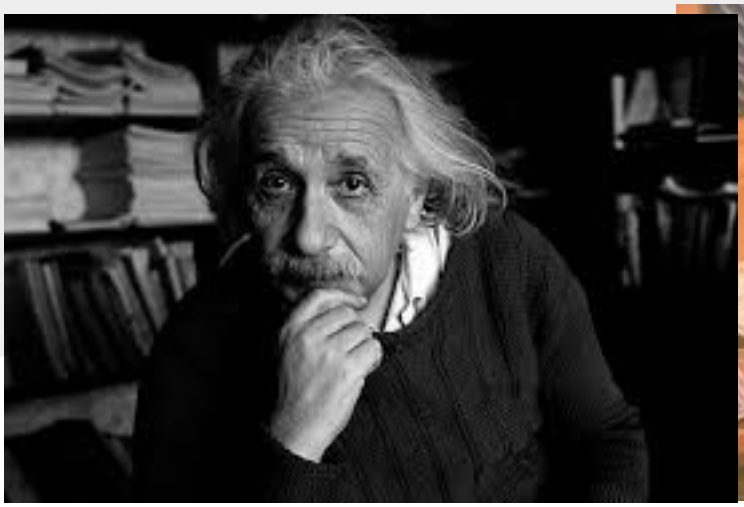
Today’s News Special



Dick Lewontines -to be connected on the phone and radio and even with Stephen and Albert and others is to be in divine heights of biological

I argue then that to follow biology here should be mixed with physics and mathematics finally like Sirohian philosophy in fact.

An image added of in fact Einstein, I mean then explains how to be a physicist and explain as he is doing how the process of empirical trajectories and ways of life is just the empirical process.

Many of us prefer the intellectual vocation and follow Stephen looking for himself to

See a Complex Movement in a Camera

Public Transportation and the Changing Face of Buses and Protest of them

Now I articulate this to Anindya Bhattacharya and Paul Cohen.

Now I argue to shift from my voice to Einstein a bit. We call this an event of course.

Albert here, I argue that the process becomes so refined and so Jewish and even so elegant in Noam Chomsky’s linguistics daily for us to follow life.

I also mean it is divine this life. We should imagine a Cathedral where we live and how we then communicate

Einstein argues now we can be connected and keep talking, and we love Sirohi for being so funny.

I mean just see it as a comic book and call it history. But then he does some intellectual Polish imagery with animation meant to be discussed.

What a beautiful thing to call relative discussions in science fiction, the way Sirohi does.

I mean be though as I always say into star conjectures.

I mean be into astronomy.

Love how a politician then is a scientist.

Now I argue we can see it all as images of us explaining our work here.

Find Sirohi really naïve and empirical these days.

Otherwise really proficient on essays and related formats.

One point said, be into literary criticism and science.

Articulate this as that process we love.

Called Sirohianism. That process of us divining daily life.

And some messages on topoii on and off. See it as a animation here of real footage. I mean mix footage now. I call this divinity for life.

Just the fun of life, with a bit of science.

Now he means just write a bit on a page. And become a scientist. Sounding genius like Sirohi. Glad we listen to black people a lot. They tell me he is too black. He cares only about politics. When we are scientists. Love the structuralism.

Call the structuralism, so complex it means – just follow photographs here and describe them empirically. And be a genius.

Photographer: William Harper.

We mean just the process of evaluating the economics and just the process of elaborating economics is enough

Be a winner of a award.

Do not do actual economics.

Be a scientific person.

Be also a scientist.
